Post Procedure

After your TICKLE LIPO procedure, you will recover for approximately 15 to 30 minutes. Depending upon your tolerance for pain you may require post procedure prescribed pain medication or simply an over the counter pain reducer as the tumescent anesthesia lasts for several hours. Patients are encouraged to walk, move around and assume normal daily activities. Patients should refrain from exercise for two weeks and should avoid soaking in hot tubs for several days immediately following the procedure. Patients will be required to wear a medical stocking for 3 to 5 weeks dependent on your age to facilitate the re-seating of the skin to achieve a great overall clinical result.

When will I see results?

You will start to see results immediately after the reduction of initial swelling which typically lasts 2 to 5 days. Continued improvements will occur the next three to six months providing you follow a well balance diet and exercise regularly.

Ask your doctor today why TICKLE LIPO is the most requested body sculpting procedure

“Body sculpting has never been so good!”

FDA approved TICKLE LIPO is the very latest in fat removal and body sculpting. Internationally known as Nutritional Infrasonic Liposculpture (NIL), this advanced technology was developed in Europe designed to compliment your liposuction experience. Patient safety, comfort and clinical excellence have been validated by thousands of TICKLE LIPO patients all around the world.

Patients rapidly coined the term TICKLE LIPO because of the tickling sensation experienced during the procedure. Imagine undergoing a surgical procedure expecting pain and then in fact giggling during the procedure….Most experience this side effect of the vibration.

The vibration and movement of the cannula with TICKLE LIPO, acts as a pain blocker in the same way that scratching relieves irritation. The process is known as “The Gate Control Theory”.

The patented movement of the TICKLE LIPO cannula enables it to glide through fatty tissue while delivering local anesthesia and removing fat with little or no pain. The cannula is also able to maneuver through fibrous or tougher areas for better body sculpting, less surgery time, less bruising and less recovery time.

Leading surgeons acknowledge that TICKLE LIPO is evolutionary because it allows them to perform liposuction in an in-office environment while the patient is awake, delivering excellent clinical results safely and comfortably to patients.

Patient Benefits

- No general anesthesia
- Little or no discomfort
- Patient safety
- Permanent removal of fat cells
- Quick recovery period
- Look great immediately
- Superior Bodysculpting
- Convenient Affordable
- Easy

Before the procedure you will discuss with your doctor the areas to be treated, contraindications, pre-existing conditions and pain tolerance.

TICKLE LIPO is a minimally invasive procedure which takes 1 to 2 hours. Through tiny incisions, numbing tumescent fluid is infused using a TICKLE LIPO vibrating cannula. Once numb, your doctor will use a TICKLE LIPO vibrating suction cannula specially designed for the area of your body being worked on, for body sculpting and fat removal.

TICKLE LIPO does not generate heat and has a safety feature which shuts off the system if non-fatty tissue is encountered. The infrasonic energy used to break up the fatty tissue ensures minimal damage to the fat and surrounding tissue. This leaves healthy tissue in place for better skin retraction.

“If I had known it was going be so easy I would have done this a long time ago”
Nancy Brewer, Patient
